ABSTRACT	xiii
SAMENVATTING	xv
CHAPTER 1	
INTRODUCTION	
1.1 PERSONAL MOBILE COMPUTING	1 – 1
1.2 PROBLEM STATEMENT	1 – 2
1.2.1 System architecture	1 – 2
1.2.2 Wireless communication	1 – 4
1.2.3 Energy efficiency	1 – 5
1.2.4 Hypothesis	1 – 6
1.3 APPROACH	1 – 6
1.3.1 System architecture	1 – 7
1.3.2 Wireless communication	1 – 9
1.4 RELATED WORK	1 – 10
1.5 THESIS OVERVIEW	1 – 12
REFERENCES	1 – 14

CHAPTER 2
DESIGN TECHNIQUES FOR ENERGY-EFFICIENT AND LOW-POWER SYSTEMS

2.1	INTRODUCTION	2 – 1
2.1.1	The advance of technology	2 – 2
2.1.2	Outline	2 – 5
2.2	FUNDAMENTALS OF LOW-POWER DESIGN	2 – 6
2.2.1	Design flow	2 – 7
2.2.2	CMOS component model	2 – 8
2.2.3	Power modelling and analysis	2 – 9
2.2.4	How much is a picojoule?	2 – 9
2.3	LOW-POWER TECHNOLOGICAL-LEVEL DESIGN	2 – 10
2.3.1	Minimise capacitance	2 – 11
2.3.2	Reduce voltage and frequency	2 – 13
2.3.3	Avoid unnecessary activity	2 – 14
2.3.4	Technological and circuit-level conclusions	2 – 16
2.4	LOW-POWER LOGIC-LEVEL DESIGN	2 – 17
2.4.1	Cell library	2 – 17
2.4.2	Clock gating	2 – 18
2.4.3	State-machine modifications	2 – 19
2.4.4	Logic encoding	2 – 20
2.4.5	Data guarding	2 – 21
2.4.6	Conclusion	2 – 21
2.5	LOW-POWER SYSTEM-LEVEL DESIGN	2 – 21
2.5.1	Optimise communication channels	2 – 22
2.5.2	Low-power memory organisation	2 – 23
2.5.3	Programmability	2 – 27
2.5.4	Operating system	2 – 30
2.5.5	Applications, compilation techniques and algorithms	2 – 37
2.5.6	Energy reduction in communication	2 – 39
2.6	CONCLUSIONS	2 – 45
	REFERENCES	2 – 47

CHAPTER 3
THE DESIGN OF A SYSTEM ARCHITECTURE FOR
MOBILE MULTIMEDIA COMPUTERS

3.1 INTRODUCTION	3 – 1
3.1.1 Mobile systems today	3 – 2
3.1.2 The future: Mobile Digital Companion	3 – 3
3.1.3 Approach	3 – 5
3.1.4 Outline	3 – 5
3.2 DESIGN ISSUES OF MOBILE SYSTEMS	3 – 5
3.2.1 Mobility	3 – 6
3.2.2 Multimedia	3 – 7
3.2.3 Limitation of energy resources	3 – 9
3.2.4 System architectural problems	3 – 9
3.2.5 System level integration	3 – 10
3.2.6 Programmability and adaptability	3 – 11
3.2.7 Discussion	3 – 11
3.3 THE SYSTEM ARCHITECTURE OF A MOBILE DIGITAL COMPANION	3 – 12
3.3.1 Approach	3 – 13
3.3.2 Philosophy	3 – 15
3.3.3 Memory-centric versus connection-centric	3 – 17
3.3.4 Application domain specific modules	3 – 22
3.3.5 The interconnection network	3 – 25
3.3.6 Energy analysis	3 – 27
3.3.7 Timing control	3 – 31
3.3.8 Quality of Service framework	3 – 32
3.4 RELATED WORK	3 – 34
3.4.1 Multimedia architectures	3 – 34
3.4.2 Heterogeneous parallel architectures	3 – 35
3.4.3 Network attached devices	3 – 37
3.4.4 Energy management	3 – 38
3.5 SUMMARY AND CONCLUSIONS	3 – 39
REFERENCES	3 – 41

CHAPTER 4

THE OCTOPUS SWITCH

4.1	INTRODUCTION	4 – 1
4.2	ARCHITECTURE OF THE OCTOPUS SWITCH	4 – 3
4.2.1	Octopus architecture	4 – 3
4.2.2	Packet size	4 – 5
4.2.3	Buffer organisation	4 – 7
4.2.4	Octopus switching fabric architecture	4 – 9
4.2.5	Module Interface Controller architecture	4 – 12
4.2.6	Connections	4 – 13
4.2.7	Scheduling	4 – 15
4.2.8	The stages of the internal communication protocol	4 – 18
4.2.9	Clock Gating	4 – 21
4.3	IMPLEMENTATION OF THE OCTOPUS SWITCH	4 – 23
4.3.1	Basic components of the testbed	4 – 23
4.3.2	Implementation	4 – 24
4.3.3	Performance	4 – 27
4.3.4	Conclusion	4 – 31
4.4	SUMMARY AND CONCLUSIONS	4 – 32
	REFERENCES	4 – 34

CHAPTER 5

ENERGY EFFICIENT WIRELESS COMMUNICATION

5.1	INTRODUCTION	5 – 1
5.2	WIRELESS DATA LINK LAYER NETWORK DESIGN ISSUES	5 – 4
5.2.1	The ISO/OSI network design model	5 – 5
5.2.2	Wireless link restrictions	5 – 6
5.2.3	Basic wireless networking functions	5 – 7
5.2.4	QoS renegotiation	5 – 9
5.3	ENERGY-EFFICIENT WIRELESS MAC DESIGN	5 – 10
5.4	ATM	5 – 14
5.4.1	ATM service classes	5 – 14
5.4.2	Admission control and policing	5 – 15
5.4.3	Wireless ATM	5 – 16

5.5 ENERGY-EFFICIENT ERROR CONTROL	5 – 17
5.5.1 The error model	5 – 18
5.5.2 Error-control alternatives	5 – 19
5.5.3 Local versus end-to-end error-control	5 – 21
5.5.4 Related work	5 – 23
5.6 ENERGY-EFFICIENT WIRELESS NETWORK DESIGN	5 – 24
5.6.1 System overview	5 – 25
5.6.2 E ² MaC protocol	5 – 27
5.6.3 QoS manager	5 – 29
5.6.4 Slot scheduler	5 – 32
5.6.5 Buffer status coding and flow control	5 – 36
5.6.6 The architecture of an energy efficient and adaptive network interface	5 – 37
5.6.7 Adaptive error control	5 – 39
5.6.8 Application interface	5 – 42
5.6.9 Implementation	5 – 43
5.6.10 Wireless communication with multiple radio's	5 – 45
5.7 EVALUATION OF THE E²MAC PROTOCOL	5 – 46
5.7.1 Synchronise the mobile and the base-station	5 – 47
5.7.2 Minimise the number of transitions	5 – 48
5.7.3 Avoid unsuccessful actions	5 – 57
5.8 RELATED WORK	5 – 61
5.9 CONCLUSIONS	5 – 63
REFERENCES	5 – 65

CHAPTER 6 CONCLUDING REMARKS

6.1 EVALUATION OF POWER DISSIPATION	6 – 1
6.1.1 Setup traditional architecture	6 – 2
6.1.2 Setup Mobile Digital Companion	6 – 4
6.1.3 Power dissipation MP3 application	6 – 5
6.1.4 Power dissipation when idling	6 – 7
6.2 FUTURE RESEARCH	6 – 9
6.2.1 Operating system architecture	6 – 10
6.2.2 Reconfigurable computing	6 – 11
6.2.3 Modelling energy management	6 – 12

6.3 CONCLUSION	6 – 13
REFERENCES	6 – 16

APPENDIX A
ENERGY EFFICIENCY OF ERROR CORRECTION
FOR WIRELESS COMMUNICATION

A.1 INTRODUCTION	A – 1
A.1.1 The encoding packet model	A – 2
A.1.2 Reed-Solomon coding	A – 4
A.1.3 EVENODD coding	A – 5
A.2 IMPLEMENTATION AND RESULTS	A – 7
A.2.1 Software implementation	A – 7
A.2.2 EVENODD coding implementation	A – 8
A.2.3 Reed-Solomon coding implementation	A – 9
A.2.4 Comparison	A – 10
A.2.5 A minimal communication system	A – 11
A.3 CONCLUSION	A – 12
REFERENCES	A – 13
